Application Details

Target Roles: Enterprise Customer Intelligence Architect, Martech Solutions Architect, Adobe Experience Cloud Architect,

Current Role: Director at Razorfish

Location Preference: Dallas, TX, Remote, Hybrid, or selective relocation for the right opportunity

Work Type: Full-time leadership / architect roles, consulting, advisory, and contract architecture projects

Target Compensation: \$200K+ base or \$220K- \$300K total compensation depending on scope, title, bonus/equity, remote

Consulting Focus: Analytics audits, Adobe/Google measurement modernization, CJA/AEP readiness, data layer architecture

Executive Summary

Enterprise customer intelligence and martech architecture leader with experience helping large organizations build trusted

Currently a Director at Razorfish, bringing enterprise consulting experience across automotive, banking, telecom, ecomm

Strong background across Adobe Analytics, Adobe Tags / Launch, Adobe Web SDK concepts, GA4, GTM, data layer arch

Positioned at the intersection of measurement architecture, customer data strategy, governance, journey analytics, and pe

Signature Positioning

I turn fragmented digital behavior into trusted customer intelligence.

My architecture approach follows a practical customer intelligence layer:

Collect -> Govern -> Stitch -> Analyze -> Activate -> Optimize

Collect: Web, app, CRM, campaign, ecommerce, service, and offline interaction data

Govern: Consent, privacy, schemas, event naming, QA standards, classifications, and data quality

Stitch: Identity, profiles, known/unknown behavior, cross-channel journeys, and customer context

Analyze: Adobe Analytics, Customer Journey Analytics, GA4, BigQuery, Looker, dashboards, and attribution

Activate: RT-CDP, Adobe Journey Optimizer, Adobe Target, audiences, journeys, and personalization

Optimize: Experimentation, conversion improvement, retention, AI-assisted insights, and growth measurement

Core Strengths

Customer Intelligence Architecture

- Design measurement systems that connect digital behavior, customer identity, analytics, reporting, and activation use cases
- Translate business questions into event taxonomies, data layer requirements, platform mappings, and reporting outcomes
- Bridge analytics, marketing, product, development, data engineering, privacy, and leadership teams
- Create practical architecture models for enterprise teams running Adobe and Google ecosystems together
- Help organizations identify gaps between data collection, reporting trust, personalization readiness, and AI-readiness

Adobe Experience Cloud

- Adobe Analytics implementation, variable strategy, events, eVars, props, processing rules, classifications, and report suites
- Adobe Tags / Launch architecture, rule logic, data elements, extensions, custom code, and QA validation
- Adobe Web SDK and Edge Network implementation concepts, migration planning, data stream thinking, and XDM-aligned
- Customer Journey Analytics readiness, data view thinking, journey analysis use cases, and AEP-based reporting models
- Adobe Experience Platform concepts including schemas, datasets, identities, XDM, governance, and customer profile readiness
- RT-CDP, Adobe Journey Optimizer, and Adobe Target architecture awareness for audience activation, journey orchestration

Google Marketing & Data Stack

- GA4 event strategy, GTM implementation, conversion tracking, event parameters, and reporting alignment
- BigQuery analytics strategy for raw event data, modeled reporting layers, customer/session/conversion marts, and SQL-based
- Looker Studio reporting concepts, dashboard governance, KPI standardization, and stakeholder-friendly insights
- Adobe + Google measurement parity across events, dimensions, conversions, audiences, and attribution logic

Measurement Governance & Data Quality

- Consent-aware measurement design across privacy categories, firing rules, tag governance, and user permission states
- Data layer architecture, naming standards, variable/event governance, QA plans, and analytics implementation documentation
- Debugging complex tracking issues across browser behavior, tag managers, plugins, cookies, localStorage, data layers, and
- Build requirements and acceptance criteria that align business users, developers, QA teams, and analytics stakeholders
- Identify root causes behind inconsistent tracking, duplicate events, incorrect attribution, missing variables, and reporting gaps

Leadership & Consulting

- Enterprise consulting background supporting complex digital ecosystems across multiple industries
- Comfortable working with business stakeholders, developers, QA, analytics teams, data teams, and client leadership
- Strong ability to simplify technical issues into clear business impact, action plans, and implementation requirements
- Known for turning ambiguous problems into structured solutions, testable requirements, and scalable governance patterns

Professional Experience

Razorfish

Associate Director, Data / Analytics Implementation

Nov 2022 – Present

Enterprise digital agency supporting large-scale customer experience, analytics, marketing technology, and digital transformation

- Lead and support enterprise analytics implementation work across large digital ecosystems, helping teams improve measurement
- Translate business and marketing requirements into analytics architecture, data layer specifications, Adobe/Google mapping
- Support measurement strategy across Adobe Analytics, Adobe Tags / Launch, Web SDK migration concepts, GA4, GTM
- Partner with developers, QA teams, product owners, analytics stakeholders, and client teams to troubleshoot data discrepancies
- Contribute to modernization of digital analytics implementations across enterprise brand environments, including platform migration
- Help teams distinguish page-view tracking, interaction tracking, link calls, custom events, plugin behavior, and reporting requirements
- Create clear requirements and expected behaviors for complex measurement logic, reducing ambiguity for developers, QA, and product owners
- Support consent-aware tracking and privacy-aligned measurement by coordinating analytics behavior with user consent strategy
- Provide senior-level review of analytics implementation issues, helping teams identify root cause and define scalable fixes
- Bring cross-industry enterprise perspective across automotive, banking, telecom, ecommerce, retail, healthcare, insurance

Previous Experience

Analytics Implementation, Digital Analytics, and Software Development Roles

Earlier Career

- Built foundation in software development and engineering before moving deeper into analytics implementation, marketing technology, and digital transformation
- Developed strong hands-on understanding of JavaScript, web behavior, browser debugging, tag execution, data layers, and analytics
- Supported analytics, tagging, reporting, and digital measurement work across multiple business models, including ecommerce, healthcare, and insurance
- Created and reviewed analytics requirements, data collection logic, QA documentation, and stakeholder-ready explanations
- Built a reputation as a root-cause problem solver who can investigate unclear data issues, isolate platform or implementation issues, and provide clear guidance

Public Strategy Labs

These are public strategy studies and reference architectures designed to demonstrate senior thinking across customer data strategy

AI-Ready Customer Intelligence Blueprint

Reference architecture for connecting data collection, consent, governance, identity, analytics, activation, and AI-readiness

Adobe + Google Measurement Parity Framework

Framework for aligning Adobe Analytics, CJA, GA4, GTM, BigQuery, and reporting definitions so enterprise teams can trust their data

Real-Time Personalization Architecture

Reference model for connecting behavior events, consent state, customer profiles, RT-CDP audiences, AJO journeys, Adobe Experience Platform

GA4 to BigQuery Analytics Mart

Conceptual analytics engineering model for transforming raw GA4 event data into cleaned events, sessions, users, conversions

Skills

Adobe: Adobe Analytics, Adobe Tags / Launch, Adobe Web SDK concepts, AppMeasurement, Adobe Experience Platform

Google: GA4, Google Tag Manager, BigQuery, Looker Studio, conversion tracking, event parameters, custom dimensions, Google Analytics

Customer Data & Martech: Customer data architecture, data layer design, event taxonomy, identity strategy, consent-aware

Technical: JavaScript, HTML, CSS, SQL, browser debugging, network request analysis, cookies, localStorage, session be

Strategy & Delivery: Measurement strategy, solution design, requirements writing, stakeholder communication, implementa
